Handling and Maintenance

Operation environment

- Place the computer on a flat stable surface not subject to shock, vibration, and danger of dropping. Do not place the computer upright or turn it over. If the computer is exposed to an extremely strong impact, it may become damaged.

- Operating environment

<table>
<thead>
<tr>
<th></th>

<tbody>
<tr>
<td>Temperature</td>
<td>-10 °C to 50 °C (14 °F to 122 °F) (IEC60068-2-1, 2)*1</td>

</tr>
<tr>
<td>Humidity</td>
<td>30% to 80% RH (No condensation)</td>
<td>30% to 90% RH (No condensation)</td>
</tr>
</tbody>
</table>

Even within the above temperature/humidity ranges, operation for a long time in extreme environments, smoking nearby, or operation in places where oil is used or where there is a lot of dust will result in the product deterioration and will shorten the product life.

*1 Do not expose the skin to this product when using the product in a hot or cold environment.

(OPERATING INSTRUCTIONS - Read Me First)
If the computer is wet in temperatures of 0 °C (32 °F) or below, freeze damage may occur. Make sure to dry off the computer in such temperatures.

- Do not place the computer in the following areas, otherwise the computer may be damaged.
  - Near electronic equipment. Image distortion or noise may occur.
  - In extremely high or low temperature.

- As the computer can become hot during operation, keep it away from items that are sensitive to heat.

Handling cautions

This computer is designed to minimize shock to parts such as the LCD and the flash memory drive and equipped with a drip-proof keyboard, but no warranty is provided against any trouble caused by shock. Be extremely careful when handling the computer.

- When carrying the computer:
  - Turn off the computer.
  - Remove all external devices, cables and other protruding objects.
  - Do not drop or hit the computer against solid objects.
  - Do not leave the display open.
  - Do not grip the display part.

- Do not put anything (e.g., a piece of paper) between the display and keyboard.

- When you board an airplane, take the computer with you and never put it in your checked luggage. When using the computer on airplane, follow the airline’s instructions.

- When carrying a spare battery, put it in a plastic bag to protect its terminals.

- The touchpad is designed to be used by finger tip. Do not place any object on its surface and do not press down strongly with sharp-pointed or hard objects that may leave marks (e.g., nails, pencils and ball point pens).

- Avoid any harmful substances such as oil from getting into the touchpad. The pointer may not work correctly.

- Be careful not to get injured by dropping or getting hit when carrying the computer.

- Use only the pen (included) to touch the screen. Do not place any object on its surface and do not press down strongly with sharp-pointed or hard objects that may leave marks (e.g., nails, pencils and ball point pens).

- Do not use the screen when dust or dirt (e.g., oil) is on the screen. Otherwise foreign particles on the screen/pen (included) can scratch the screen surface or obstruct the pen (included) operation.

- Use the pen (included) only for touching the screen. Using it for any other purpose may damage the pen (included) and result in scratches on the screen.
Handling and Maintenance

- The pointer cannot follow the pen (included) movement if you move the pen (included) too quickly.

<Only for model with digitizer>
- The digitizer uses electromagnetic induction and may not work properly near strong electrical field or magnetic field such as:
  - Near AM radio base station or relay station antennas
  - Near CRT displays that generate strong electromagnetic field noise Move the digitizer away from such locations so it will work properly.

■ When using peripheral devices
Follow these instructions and the Reference Manual to avoid any damage to the devices. Carefully read the instruction manuals of the peripheral devices.
- Use the peripheral devices conforming to the computer’s specifications.
- Connect to the connectors in the correct direction.
- If it is hard to insert, do not try forcibly but check the connector’s shape, direction, alignment of pins, etc.
- If screws are included, fasten them securely.
- Remove the cables when you carry the computer. Do not pull the cables forcibly.

■ Preventing your computer from unauthorized use via wireless LAN/Bluetooth/wireless WAN
<Only for model with wireless LAN/Bluetooth/wireless WAN>
- Before using wireless LAN/Bluetooth/wireless WAN, make the appropriate security settings such as data encryption.

■ Battery Recalibration
- The battery recalibration may take a long time due to the large battery capacity. This is not a malfunction.
  <When performing “Battery Recalibration” after shutting down Windows>
  - Full charge: Approximately 3.5 hours
  - Complete discharge: Approximately 4 hours
When performing “Battery Recalibration” without shutting down Windows, it may take more time to charge / discharge.

■ Battery duration
- Note that the computer consumes electricity even when the computer power is off. If the battery pack is fully charged, the battery will fully discharge in the following period of time:

<table>
<thead>
<tr>
<th>Status</th>
<th>Discharge period</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

*2 When “Wake Up from wired LAN” is enabled.
The battery duration while the USB port continuous charging function is not used. The above value is the holding time at room temperature.

■ When the battery indicator does not light on
The battery indicator may not light on even if the AC adaptor and the battery pack are correctly connected to the computer, due to the following reasons.
- The AC adaptor’s protection function may be working. In this case, pull out the AC cord and wait for more than 1 minute before reconnecting the AC cord.

## Sensors

This computer is equipped with four sensors (acceleration sensor, gyro sensor, magnetic sensor, ambient light sensor), and you can use these sensors with any software that is compatible. As the accuracy of each sensor output is dependent on the operating environment and other conditions, the results should only be used as a reference. The acceleration sensor, gyro sensor, and magnetic sensor are located at the bottom left of the LCD. The detection results of each sensor may vary depending on how you are holding the computer, the application software you are using, and other factors.

**Automatic brightness adjustment**

The computer is equipped with an automatic brightness adjustment function that adjusts the display screen based on the ambient light sensor. You can configure the automatic adjustment function as follows.

### Windows 10

1. Click (Start) at the lower left, and then click (Settings) - [System] - [Display].
2. Set [Change brightness automatically when lighting changes] to [On].

### CAUTION

- The [Adjust my screen brightness automatically] item may not be available in some cases. In such cases, click the arrow to the left of [Settings] at the top left of the screen, and perform the operation from [System] - [Display] again.

### Windows 7

1. Click (Start) - [Control Panel] - [Hardware and Sound] - [Power Option].
