CONNECTION TO Wi-Fi & EVA ROP APP

AU-EVA1 Setup Guide

iOS & ANDROID

EVA1

EVA1 INFRA Connection

Wi-Fi INFRA connects devices with the use of a wireless access point. All devices on the network will communicate with the same access point. This requires a network and access point to be set up and running.

Note: AU-EVA1 only supports AJ-WM50 Wi-Fi dongle.

Panasonic

1: Press MENU button on side of camera. Select NETWORK SETTINGS.

4: Select INFRA(SELECT). Select desired network.

2: Select WLAN under NETWORK SEL.

5: Enter network password under ENCRYPT KEY. Camera will display white bars on main screen when connected.

3: Select NETWORK PROPERTY followed by TYPE.

6: DHCP will switch to CLIENT. Default IP is 192.168.0.1
*Your IP ADDRESS may be different.

AU-EVA1 SETUP GUIDE

EVA1 + iOS INFRA Connection

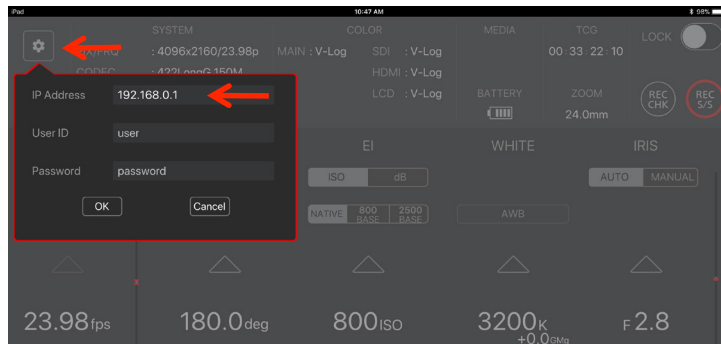

Wi-Fi INFRA connects devices with the use of a wireless access point. All devices on the network will communicate with the same access point. This requires a network and access point to be set up and running.

Note: AU-EVA1 only supports AJ-WM50 Wi-Fi dongle.

1: Take note of the IP address.
This will be needed for iOS setup.
**The IP address may be different for your camera.*

2: First connect the iOS device to the same network as the camera.
Next, open EVA ROP app.
– Enter IP Address after clicking on settings as shown in the picture.
– **Exit MENU** on camera and click ok, camera should connect.
– User ID and Password are **optional** and only needed if one is created and added in camera under NETWORK FUNC.

If necessary:

Default User ID: **guest** (up to 31 characters)
Default Password: **august** (6-15 characters)

EVA1 + Android INFRA Connection

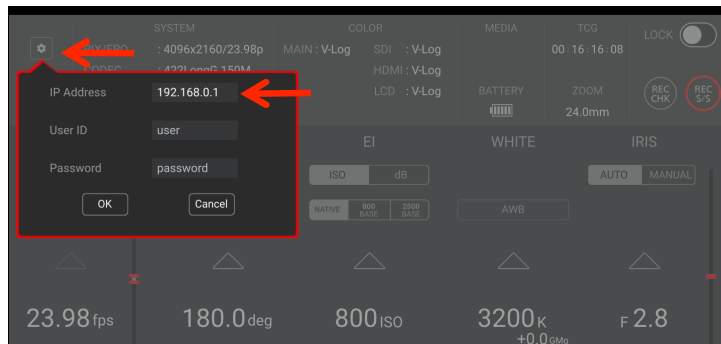

Wi-Fi INFRA connects devices with the use of a wireless access point. All devices on the network will communicate with the same access point. This requires a network and access point to be set up and running.

Note: AU-EVA1 only supports AJ-WM50 Wi-Fi dongle.

1: Take note of the IP address.
This will be needed for Android setup.
**The IP address may be different for your camera.*

- 2: First connect the Android device to the same network as the camera.
Next, open EVA ROP app.
- Enter IP Address after clicking on settings as shown in the picture.
 - **Exit MENU** on camera and click ok, camera should connect.
 - User ID and Password are **optional** and only needed if one is created and added in camera under NETWORK FUNC.

If necessary:
Default User ID: **guest** (up to 31 characters)
Default Password: **auguest** (6-15 characters)

EVA1 DIRECT Connection

Wi-Fi Direct enables devices to easily connect with each other without requiring a wireless access point. This method may be more convenient depending on the situation.

Note: AU-EVA1 only supports AJ-WM50 Wi-Fi dongle.

1: Press MENU button on side of camera.
Select NETWORK SETTINGS.

4: Select DIRECT. Select desired network.

2: Select WLAN under NETWORK SEL.

5: **AU-EVA1** is the default SSID for your device to connect to. **5GHz BAND** is recommended for demo use. Please take note of this.

3: Select NETWORK PROPERTY followed by TYPE.

6: DHCP will switch to SERVER.
Default IP is 192.168.0.1
*Your IP ADDRESS may be different.

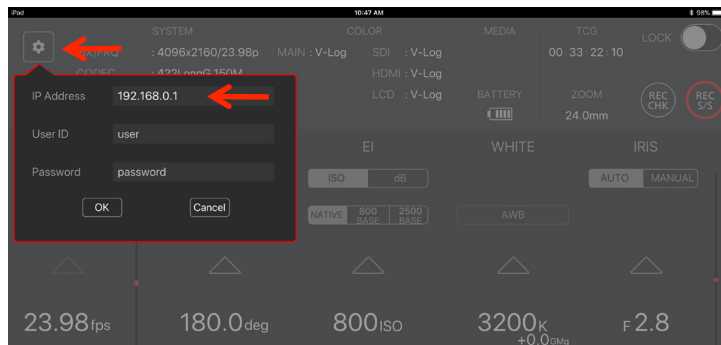

EVA1 + iOS DIRECT Connection

Wi-Fi Direct enables devices to easily connect with each other without requiring a wireless access point. This method may be more convenient depending on the situation.

- 1: Take note of the IP address.
This will be needed for iOS setup.
**The IP address may be different for your camera.*

- 2: First connect the iOS device to the default camera network: **AU-EVA1**
The password is **01234567890123456789abcdef**
Next, open EVA ROP app.
– Enter IP Address after clicking on settings as shown in the picture.
– **Exit MENU** on camera and click ok, camera should connect.
– User ID and Password are **optional** and only needed if one is created and added in camera.

If necessary:

Default User ID: **guest** (up to 31 characters)
Default Password: **auguest** (6-15 characters)

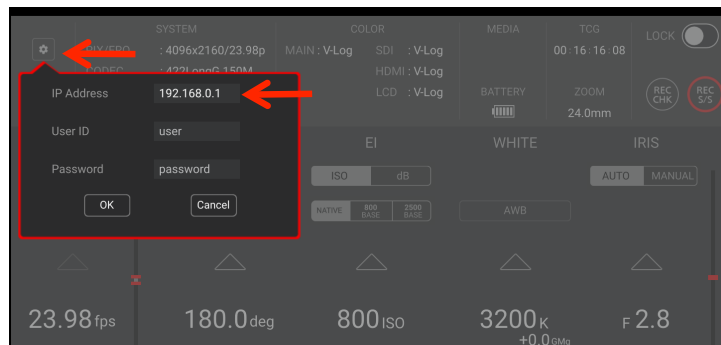

EVA1 + Android DIRECT Connection

Wi-Fi Direct enables devices to easily connect with each other without requiring a wireless access point. This method may be more convenient depending on the situation.

1: Take note of the IP address.
This will be needed for Android setup.
**The IP address may be different for your camera.*

2: First connect the Android device to the default camera network: **AU-EVA1**

The password is **01234567890123456789abcdef**

Next, open EVA ROP app.

– Enter IP Address after clicking on settings as shown in the picture.

– **Exit MENU** on camera and click ok, camera should connect.

– User ID and Password are **optional** and only needed if one is created and added in camera.

If necessary:

Default User ID: **guest** (up to 31 characters)

Default Password: **august** (6-15 characters)

FAQs

Camera does not establish connection to access point (Infra) or device (Direct).

- Make sure Wi-Fi dongle is properly connected. Turn off camera, disconnect and reconnect dongle. Turn on camera. *Only AJ-WM50 is compatible.*
- Make sure SSID/network password is correct(Infra). Make sure SSID/password on external device connecting to camera is correct(Direct).
- Exit the camera menu if open.
- Connection may take up to 30 seconds.

Why is a communication error message popping up in the app?

- Exit the camera menu if open. Close and reopen the app.
- Make sure the IP address of the camera is the same as what was typed in the app settings.
- Make sure Used ID and Password are the same as what was entered in the camera (if applicable).

iOS or Android device disconnects from the camera when using Direct mode.

- External devices may disconnect due to the lack of internet connection.
- A notification should pop up on your device to continue connection.
- If not, connect back to the camera manually in device settings.
