Panasonic CONNECT
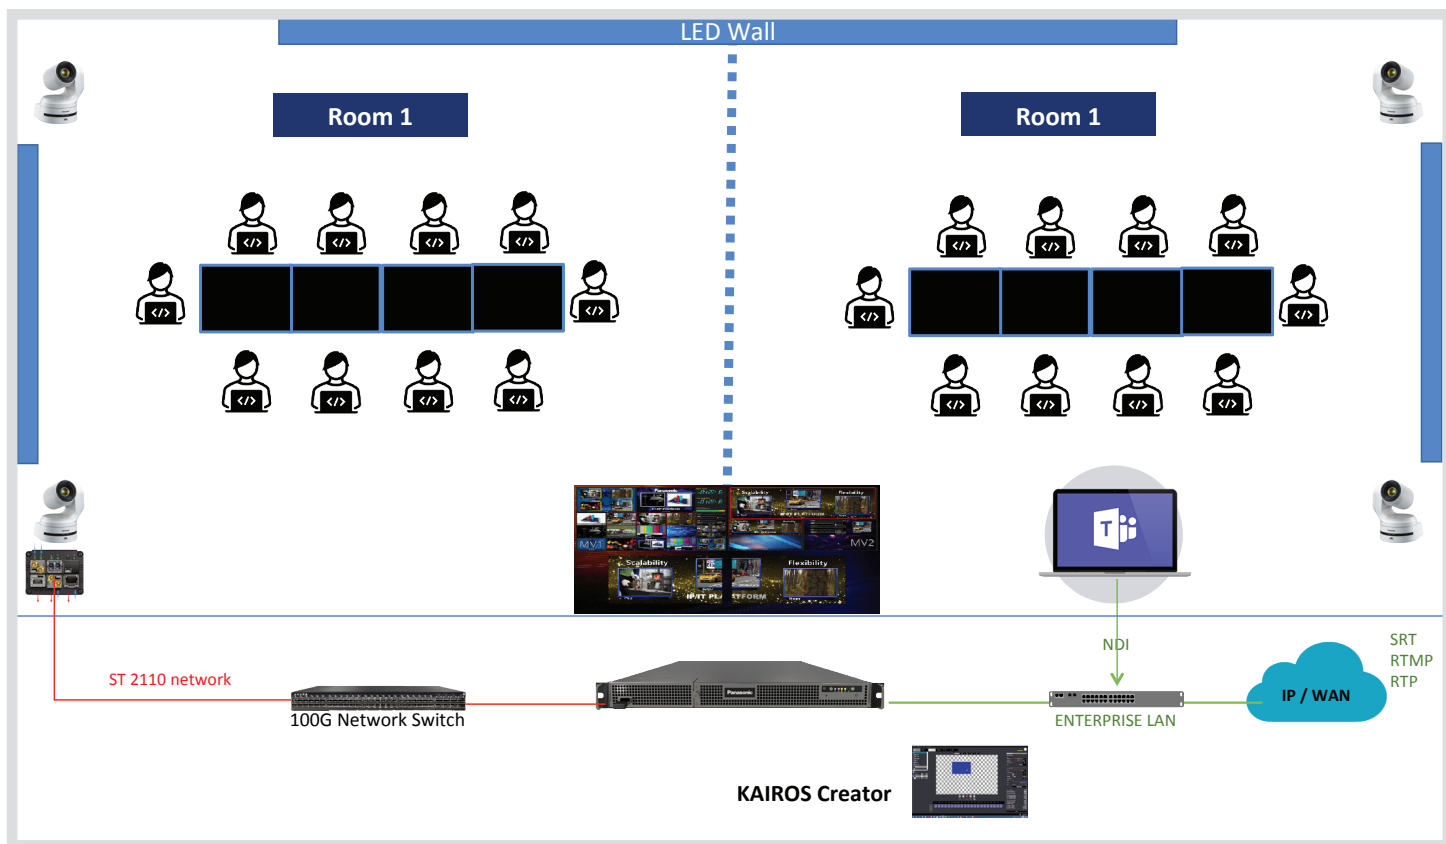

KAIROS *More than a Switcher*

An IT/IP video processing platform with the powerful capabilities for all your corporate productions

KAIROS
Incredible Productivity

Panasonic CONNECT
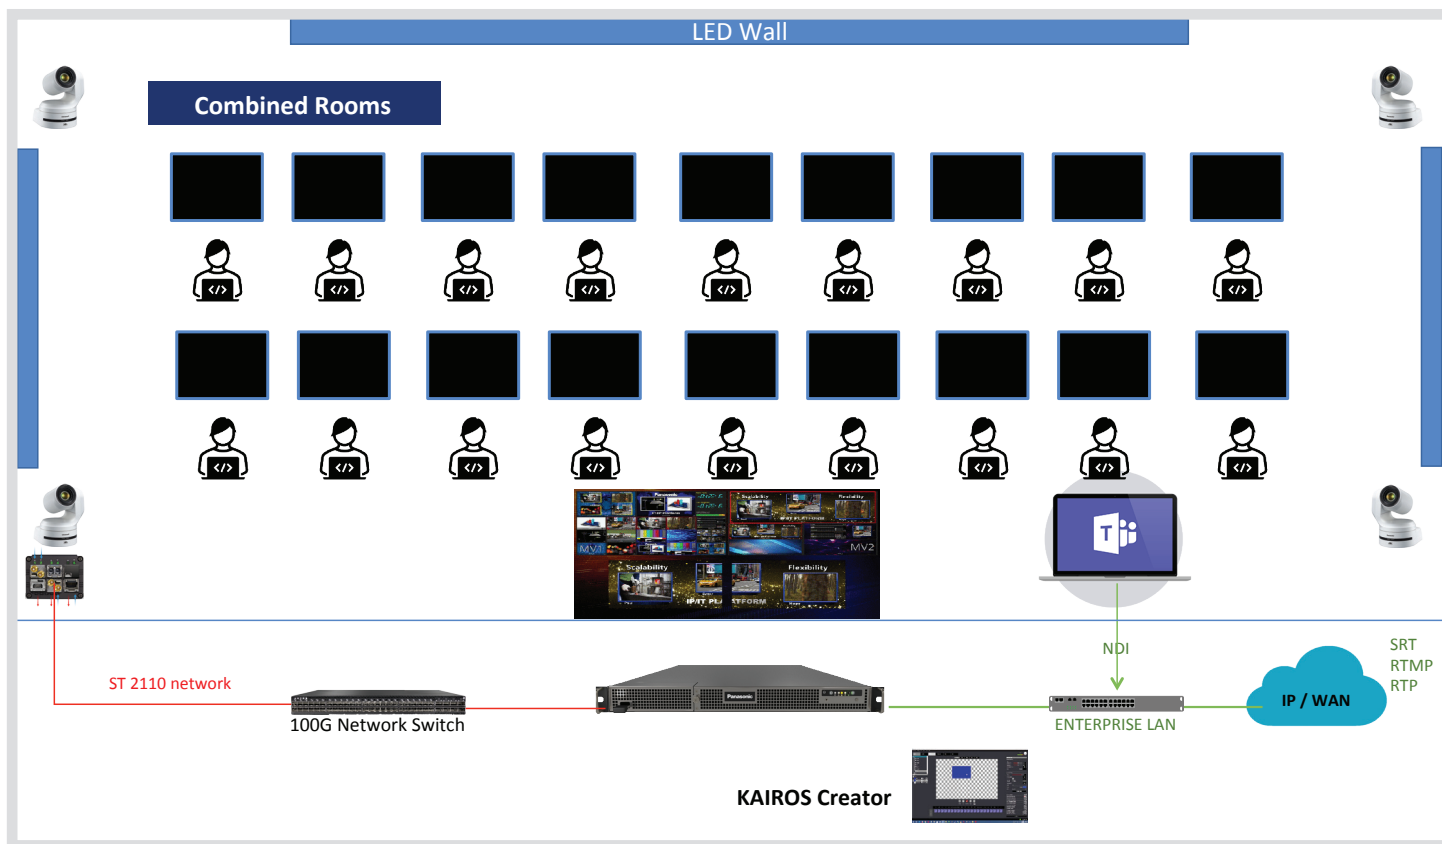

Multiple Conference Room Systems

Perfect for corporations with multiple conference, multi-purpose rooms, screening rooms, and other video needs throughout their facility, campuses, or remotes, KAIROS can run in-person or virtual team meetings in different rooms simultaneously with a single operator.

Rich screen or streaming content can be composed as easily as Photoshop with KAIROS Creator, our desktop GUI for PC or Mac, while video content is processed in KAIROS Core, an enterprise-class Linux server mainframe.

OTHER KEY KAIROS BENEFITS

- Control devices streaming and camera robotic control all interface with KAIROS on a simple LAN

- Video sources or screens are connected through baseband video connections, IP Streaming, or uncompressed on a high-capacity ST 2110 IP network and that means any source can be directed to any screen

- Remote Sources can stream directly to KAIROS over SRT (Secure Reliable Transport), an open source video transport protocol

- Using NDI, KAIROS can interface seamlessly with video conferencing systems like Zoom and TEAMS

Panasonic CONNECT

Build Complex Screen Content and Easily Re-configure for Different Events

With KAIROS Core 100, Panasonic's affordable, entry-level system, AV operations can easily reconfigure production set ups and repurpose systems and screens similarly to reconfiguring a multi-purpose room, as events are combined or divided throughout a facility, a campus, or across the country with remotes.

KAIROS Core 100 can drive 16 independent HD outputs*. With the Canvas feature**, KAIROS can drive LED walls, edge blended projection or other monitor walls of unusual sizes and shapes, removing the need and associated complexity of a separate-screens processor.

OTHER KEY KAIROS BENEFITS

- KAIROS can drive multiple independent screens with the same content flexibility on every output
- Outputs are created in the native resolution of the destination screen
- Multiple PIPs, KEYS, graphics, clips and still images can be layered on any output with or without transitions

*Base model AT-KC100 features 12 HD outputs with options to increase to 16 and/or enable 4K; 20 HD or five 4K is standard for the KC1000.
**Canvas is an optional feature in the AT-KC100 KAIROS Core but is standard in the AT-KC1000 KAIROS Core.
