#### INSIGHT WHEN THE CALL COMES IN

Rugged mobile tablets and laptops with antennae wireless modules and shock-mounted hard drives can withstand vibrations and shocks and help ensure that crews arrive quickly and are prepared for the situation.

When a call comes in via computer-aided dispatch (CAD), responders can head to the scene while reliably accessing and sharing information:

## CRITICAL INFORMATION TO HELP BUILD A STRATEGIC PLAN OF ACTION

While en route to the scene, connectivity is essential. Mobile solutions can help provide EMS technicians with access to electronic health records (EHRs) and electronic patient care reports (ePCRs) to help them understand patient history and prepare for treatment. Built-in GPS used with geographic information system (GIS) provides critical information such as physical location, the best route for travel and more.

With access to critical information right when it's needed, EMS technicians can:
